

Vadym Zelenko

Web Developer

✉ zelenko009@gmail.com

About me

Versatile and detail-oriented Full-Stack Developer. Skilled in **Python (Flask, Django, FastAPI)**, **JavaScript (React, Node.js)**, and experienced in **Docker, MongoDB, Redis, OAuth2**, and **RESTful APIs**. Passionate about writing clean, maintainable code and delivering real-world solutions. A fast learner with a strong focus on performance, user experience, and software quality.

Education

Bachelor in Automation and Computer-Integrated Technologies 2021 - 2025

Kharkiv National University of Radio Electronics, Kharkiv

Focused on software development for automation and embedded systems. Acquired solid skills in **C++**, **Python**, and **JavaScript**, including development of control and data acquisition systems.

Place of work

Website Administrator 2023 - 2025

Kharkiv National University of Radio Electronics, Kharkiv

Managed and maintained the university's official website. Responsible for content updates, server administration, and website security. Improved performance and reliability by optimizing CMS and backend configurations. Worked with **HTML**, **CSS**, **JavaScript**, and **Python-based tools**.

English

Hobby

■ Chess

■ Web design

■ Programming

■ Puzzles

Projects

Pacman Web Game

Developed an interactive Pacman game using **React** for the frontend and **Node.js / Express** for the backend. Implemented **Google OAuth 2.0** authentication for user registration and login. Integrated a **MongoDB** database to store player data and leaderboard scores in real time. Focused on responsive design, smooth animations, and optimized game logic for performance and scalability.

Technologies: React, Node.js, Express, MongoDB, OAuth 2.0, JavaScript, HTML, CSS

Online Compiler

Built a web-based code compiler that allows users to write, run, and debug code directly in the browser. Implemented support for multiple programming languages with real-time output using API integration. Designed a clean and responsive frontend with **React**, and a secure backend using **Python (FastAPI)** and **Docker** for sandboxed code execution.

Technologies: React, FastAPI, Docker, JavaScript, Python, REST API, HTML, CSS
